Professional profile

Full Stack Product Engineer with experience taking products from initial definition through production. I work across frontend, backend, data and integrations, and collaborate directly with clients to understand needs, present new functionality and validate how products evolve. My current work is focused especially on B2B products.

Experience

Full Stack Product Engineer

Jan. 2026 - Present

Performanze

Madrid, Spain

DUPLEX · SAT technical support module

- I provide technical leadership for the SAT module within DUPLEX, a tool that supports elevator technicians while diagnosing and tracking faults. I take part in client meetings to understand needs, discuss requirements, present new functionality through live demos and turn feedback into subsequent product iterations.
- I work on an architecture that adapts diagnosis to different types of elevator equipment, using the documentation, diagnostic steps and history relevant to each intervention. To retrieve useful technical information, we connect the technician's issue with manuals and documentation through **RAG, embeddings and vector databases**.

OVI · Microsoft 365 conversational assistant

- I work on OVI, a conversational assistant that lets users work with Microsoft 365 directly from chat: checking email, meetings and conversations, working with SharePoint and OneDrive files, and creating Word, Excel and PowerPoint documents without switching applications.
- I integrate external services through APIs including **Microsoft Graph** and **Gamma**. Microsoft Graph connects the assistant to Microsoft 365, while Gamma is used within presentation-generation workflows.
- I develop mechanisms that preserve context between messages and retrieve relevant information from previous conversations using short- and long-term memory and semantic retrieval.

Software Developer

Jan. 2025 - Jan. 2026

Telefónica Tech

Madrid, Spain

TRUSTOS · Digital identity and Verifiable Credentials

- I worked across frontend and backend on TrustOS, a platform for issuing and verifying digital credentials that can be stored and presented through different wallets.
- I built **REST APIs** for credential issuance and verification using Node.js/TypeScript, MongoDB and OpenAPI contracts, and worked on QR flows integrating external providers including **PrivadoID, Procivis and Idenfy**.

Projects

BROKI · Independent project · Airport operations CRM

2026

I developed BROKI, an operational CRM designed to centralize the equipment and resources used in airport ground operations: vehicle fleets, Ground Support Equipment (GSE), inventory, tools and personnel. I worked across the product end to end, from architecture and data modeling to backend services, PWA interface and QA, including availability, assignments, incidents and traceability.

Technical skills

Languages: TypeScript, JavaScript, Python, SQL, C, C++, Bash

Frontend: React, Next.js, Vite, Tailwind CSS

Backend & data: Node.js, Express, REST APIs, GraphQL, PostgreSQL, Supabase, MongoDB

AI & information retrieval: LangChain, RAG, embeddings, vector databases, semantic retrieval

Development & delivery: Claude, Codex, Cursor, Playwright, Docker, CI/CD, Vercel, Git

Spoken languages: Native Spanish and Catalan; intermediate English

Education

42 Madrid Programming Campus, Fundación Telefónica

2023 - Present

Project-based systems programming training covering C/C++, UNIX, processes, concurrency and graphics. Selected projects: Minishell, cub3D and Philosophers.

Advanced Diploma in Networked Computer Systems Administration (ASIR), ITEP

2020 - 2022
